## **ISO15408 – Common Criteria**

The Common Criteria for Information Technology Security Evaluation (Common Criteria or CC) is an international standard (ISO / IEC 15408) for IT product security certification. It is a framework that provides criteria for independent, scalable and globally recognized security inspections for IT products. It is especially designed for products destined for highly security-intensive markets, such as governmental, banking or military sectors. Certification according to this standard is therefore essential.

ISSS experts are happy to support you with extensive common criteria consultation services during the complex evaluation process leading to final certification by a certification body.

### **Benefits:**

- Professional support and help with the CC evaluation and certification of your product.
- Well-trained personnel with in-depth knowledge of the Common Criteria standard.
- Reliable and extensive evaluation services from an independent Certification Body.
- Tailored consultancy on IT product security and certification.
- Please contact us to learn more about how our common criteria services according to ISO 15408 can benefit your company.
