## **ISO45001 - Occupational health and safety**

ISO 45001 is the world's international standard for occupational health and safety, issued to protect employees and visitors from work-related accidents and diseases. ISO 45001 certification was developed to mitigate any factors that can cause employees and businesses irreparable harm. Its standards are the result of great effort by a committee of health and safety management experts who looked closely at a number of other approaches to system management — including ISO 9001 and ISO 14001. In addition, ISO 45001 was designed to take other existing occupational health and safety standards, such as OHSAS 18001, into account — as well as the ILO's labour standards, conventions and safety guidelines.

Especially geared toward senior management, ISO 45001 has the ultimate goal of helping businesses provide a healthy and safe working environment for their employees and everyone else who visits the workplace. This goal can be achieved by controlling factors that could potentially lead to injury, illness and — in extreme situations — even death. As a result, ISO 45001 is concerned with mitigating any factors that are harmful or that pose a danger to workers' physical and/or mental well-being.

### **Benefits:**

- Positions your business as industry leaders.
- Increases trust.
- Consistency means efficiency.
- Lowers insurance premiums.
- Improves individual safety as well as organisational.
- Improves managerial oversight.
- Preventative risk and hazard assessment.
- Increases return on investment (ROI)
- Occupational focus
- Deals with risk and opportunities
